

Model 143-80-6

Domestic Service Regulator with Low Pressure Cut-Off

Technical Data

Valve Body	Cast Iron - 125 psig working pressure
Spring Case and Lower Case	Die-Cast Aluminum
Orifice	Aluminum
Fulcrum Pin	Stainless Steel
Valve Seat	One piece Buna-N
Valve Stem	Fiberglass reinforced nylon
Throat/Support/Stem Guide	Cast Aluminum integral to the lower case.
Diaphragm Plate	Plated Steel
Diaphragm	Nylon fabric-reinforced Buna-N
Vent and Valve	Polyethylene valve and seat, 1" NPT vent
Operating Temperature	-20° to +150° F (-28.9° to +65.5° C)
Corrosion Protection	Cases dip primed chromate conversion coating, enamel topcoat
Internal Relief Valve	Set to relieve at approximately 7-10" w.c. above normal outlet pressure setting

Dimensions

Valve Body Sizes

Straight
3/4" x 3/4"
3/4" x 1"
1" x 1"
1" x 1-1/4"
1-1/4" x 1-1/4"

Mounting Positions

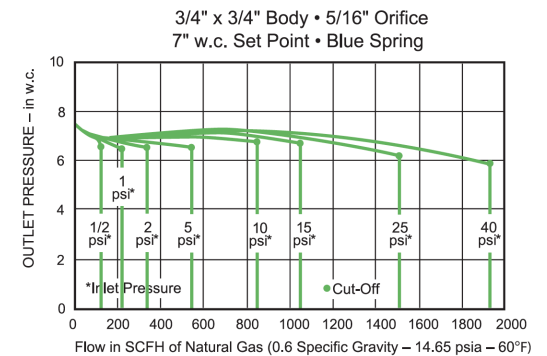

Orifice and Maximum Inlet Pressure

Pressure	Size	Part Number
60 psig	1/4"	143-62-023-49
40 psig	5/16"	143-62-023-51
25 psig	3/8"	143-62-023-52
15 psig	7/16"	143-62-023-53

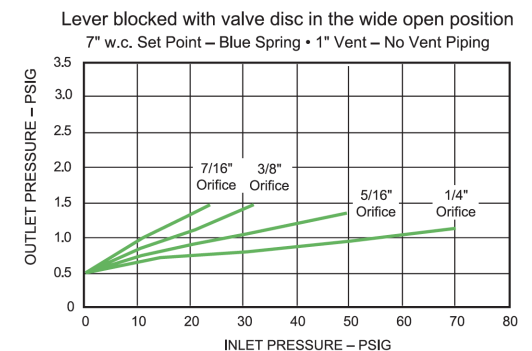

Regulator Spring Chart

Normal Range	Color	Part Number
4-1/2" - 7-1/2" w.c.	Red	143-62-021-15
6" - 9-1/2" w.c.	Blue	143-62-021-16
7-1/2" - 15" w.c.	Green	143-62-021-17
13-1/2" - 29" w.c.	Orange	143-62-021-18

Typical Performance Curve

Internal Relief Valve

For outdoor installations, it is recommended that the regulator be installed so that the regulator vent faces downward to avoid the potential for water and other foreign matter entering the regulator and interfering with the proper operation of the regulator.

Model 143-80-6

Domestic Service Regulator with Low Pressure Cut-Off

Capacities

SCFH Natural Gas (0.6 specific gravity - 14.65 psia - 60° F)

Pipe Size: 3/4 x 3/4"

(Red or Blue Spring)

Full Open Capacity Calculations

Formula 1: For $\frac{P_1}{P_0}$ less than 1.894)

$$Q = K \sqrt{P_0(P_1 - P_0)}$$

Formula 2: For $\frac{P_1}{P_0}$ greater than 1.894)

$$Q = \frac{KP_1}{2}$$

Where:

Q = max. capacity of regulator (in SCFH of 0.6 specific gravity natural gas)

K = the regulator constant from the table below (orifice with low pressure cut-off stem inside)

7/16"	5/16"	1/4"	1/8"
400	206	132	33

P₁ = absolute inlet pressure (psia)

P₂ = absolute outlet pressure (psia)

Pipe Size: 1-1/4" x 1-1/4"

(Red or Blue Spring)

NOTES:

Outlet Pressure variations:

- Red Spring 4-1/2" to 7-1/2" w.c.
- Blue Spring 6" to 9-1/2" w.c.
- Green Spring 7-1/2" - 15" w.c.
- Orange Spring 13-1/2" to 29" w.c.

Figures highlighted in each column indicate maximum capacity for each orifice at recommended pressure within the optimum performance range. This performance data is based on normal testing at 70° F flowing temperature. Changes in performance can occur at extreme low flowing temperatures. Maximum Emergency Pressure under normal operating conditions without damaging the regulator:

- Inlet = Stated Max. Inlet Pressure + 10 psi.
- Diaphragm case = Set Point + 3 psi.

If the outlet pressure exceeds this pressure, the regulator must be removed from service and carefully inspected. Damaged or otherwise unsatisfactory parts must be replaced before returning the regulator to service. The maximum outlet pressure safely contained in the diaphragm case is 10 psi. (Safely means no leakage as well as no bursting.)
